SUMMARY

Senior AI Engineer with 6+ years building document AI, automation and backend systems for finance, logistics, ERP and e-commerce operations. I design and ship OCR and NLP pipelines, ERP and e-commerce integrations and high-availability Python backends end to end. Across 25+ production applications, my systems have served 10,000+ users, processed \$1M+ in transactions and run at 99.9% uptime on AWS. Experienced leading teams of 3–6 developers.

SELECTED PROJECTS

AP Automation & OCR

Python · Django · OCR · Redis

- Automated accounts-payable processing: invoices are read with OCR, validated and posted to finance systems, cutting manual processing time by 60%.
- Built on asynchronous workers with Redis distributed locking, atomic operations and retry logic to keep financial records consistent under load.

ERP & E-commerce Integrations

n8n · Zapier · Webhooks · REST / GraphQL / SOAP

- Connected ERP systems with e-commerce stores and business software using n8n, Zapier, webhooks and custom APIs, syncing orders, products and financial data and improving operational efficiency by up to 40%.

Document Ingestion & Product Vision

Python · Tesseract · GLiNER · Hugging Face

- Built AI ingestion for invoices and business documents, extracting structured fields with Tesseract OCR and regex, and entities with GLiNER zero-shot NER.
- Added camera-based detection of products, allergens and product attributes using custom Hugging Face models.

EXPERIENCE

Senior AI Engineer — Panni Management Corp, Canada (Remote)

2023 – Present

- Build AI document processing (OCR, NLP, computer vision) that automates enterprise finance and operations workflows.
- Design concurrent processing pipelines with distributed workers, task queues, Redis locking, retries and error recovery for transactional, mission-critical workflows.
- Deploy and operate services on Docker, Kubernetes and AWS for 10,000+ users, with RBAC-secured admin tools, structured logging and monitoring.

Senior Software Engineer — AIMVIZ Pvt Ltd

2021 – 2023

- Built backend and full-stack applications in Python/Django, React, Node.js and PHP for enterprise and customer-facing products.
- Integrated ERP systems and third-party platforms through REST, SOAP and GraphQL APIs.
- Designed event-driven workflows and background processing; tuned schemas, indexes and queries for high-volume workloads.

Software Engineer — S2F Lab Pvt Ltd

2019 – 2020

- Developed backend features, APIs, database schemas and third-party integrations for enterprise web platforms and CMS-based systems.

SKILLS

AI & Document Intelligence: LLMs, OpenAI API, Hugging Face, GLiNER, NLP, Tesseract OCR, Computer Vision, Prompt Engineering

Integrations & Automation: n8n, Zapier, Webhooks, REST, GraphQL, SOAP, ERP and E-commerce Integration

Backend: Python, Django / DRF, FastAPI, Flask, Node.js, Express, PHP

Systems: Distributed Systems, Event-Driven Architecture, Async Processing, Worker Queues, Distributed Locking, RBAC

Data & Infrastructure: PostgreSQL, MySQL, MongoDB, Redis, AWS (EC2, S3, ELB), Docker, Kubernetes, Linux, Nginx, CI/CD

EDUCATION

BSc Computer Science — University of London, Goldsmiths

In progress
